1. Overview of the AV10 Remote

The **AV10 Universal Remote Control**from Shanhuore is engineered to streamline your home entertainment experience. Designed with a minimalist aesthetic and ergonomic button layout, the remote offers a seamless interface for controlling a wide range of devices, from smart TVs and streaming boxes to Blu ray players and soundbars.

Key design highlights include:

- LED backlit buttons for visibility in low light rooms
- Long lasting rechargeable battery (included)
- Intuitive navigation with a dedicated "Menu" button
- Compact form factor for easy storage and portability
- Built in learning mode for devices not listed in the code database

With the **AV10**remote, you eliminate the clutter of multiple remotes and gain a single, reliable control point for all your media devices.

2. Key Features & Benefits

Universal Compatibility

The remote supports over 10,000 device codes, covering the majority of brands and models on the market. From Samsung and LG TVs to Sony Blu ray players and Roku streaming sticks, the AV10 remote adapts to your ecosystem effortlessly.

Powerful Learning Mode

When a device isn't listed in the code database, the remote's learning mode captures the infrared (IR) signal from

your existing remote and stores it. This feature ensures that even niche or older devices can be controlled.

Intuitive Menu Navigation

With a single “Menu” button and a directional pad, you can access advanced settings, change the remote’s language, or adjust the power on behavior without the need for additional buttons.

Energy Efficient Operation

The AV10 remote features an auto sleep mode that powers down after 15 minutes of inactivity, conserving battery life. When you press any button, the remote wakes instantly.

Enhanced Safety & Reliability

All IR signals are transmitted through a shielded circuit, reducing interference and ensuring consistent performance even in rooms with multiple devices.

3. Device Compatibility

The AV10 remote is engineered to work with a wide range of device categories. Below is a categorized list of supported devices:

- Televisions: Samsung, LG, Sony, Panasonic, Philips, Vizio, TCL, and many more.
- Set Top Boxes & Streaming Devices: Roku, Amazon Fire TV, Apple TV, Chromecast, and more.
- Blu ray & DVD Players: Sony, Panasonic, Samsung, LG, and others.
- Soundbars & Audio Receivers: Bose, Sony, Yamaha, Denon, and more.
- Gaming Consoles: Xbox, PlayStation, Nintendo Switch.
- Home Theater Systems: Home theater receivers, amplifiers, and subwoofers.

For a complete, up to date list of supported models, refer to the AV10 user manual’s code table or the Shanhuore website’s online database.

4. Initial Setup & Power On

1. Insert the battery pack: Slide the rechargeable battery into the compartment located on the back of the remote. Ensure the contacts are aligned correctly.
2. Power on the remote: Press any button. The LED indicator will flash once, confirming the remote is active.
3. Check the LED status: A steady light means the remote is fully charged. If it’s flashing rapidly, the battery is low and should be recharged.
4. Locate the “Menu” button: This button will be used for advanced settings and programming.

Once the remote is powered on, you’re ready to program your first device.

5. Programming Your Devices

Programming the AV10 remote can be done in three primary ways: direct code entry, auto search, or manual menu navigation. Choose the method that best suits your device type and your comfort level.

5.1 Direct Code Entry

For devices that have a known code in the remote’s database, the direct entry method is the fastest.

1. Press the Menu button.
2. Use the directional pad to navigate to “Device Setup” and press Enter.
3. Select your device category (e.g., TV, DVD Player).

4. Choose “Code Search” and then “Direct Entry.”
5. Input the 4 digit code displayed in your user manual or online database.
6. Press Enter to confirm. The remote will test the code.
7. If successful, the LED will flash once and the remote will display “Success.”
8. Press Enter again to save the code.

Tip: Keep your original remote handy; the AV10 may need to be in proximity during the test.

5.2 Auto Search Mode

When you’re unsure of the device’s code, the auto search mode can find a compatible code automatically.

1. Press Menu !’ “Device Setup” !’ “Code Search” !’ “Auto Search.”
2. Point the remote at your device.
3. Press any button on the AV10. The remote will cycle through available codes.
4. When the correct code is found, the LED will flash twice.
5. Press Enter to confirm.

Auto search works best with devices that have a standard IR protocol. If the remote fails to find a code, try the learning mode.

5.3 Manual Programming via Menu

For advanced users, the manual menu offers granular control over the remote’s behavior.

1. Press Menu !’ “Device Setup” !’ “Manual”.
2. Select your device category.
3. Navigate to “Custom Code” and choose the desired function (e.g., Power, Volume).
4. Enter the code manually or use the learning mode to capture the signal.
5. Press Enter to save each function.

This method is ideal for customizing the remote’s button mapping or for devices that use non standard codes.

6. Advanced Settings & Customization

The AV10 remote offers several advanced features that enhance usability and personalize your experience.

6.1 Power On Behavior

By default, pressing the remote’s power button will turn on the device and, if configured, the TV’s power on signal. To modify this behavior:

1. Press Menu !’ “Device Setup” !’ “Power On”.
2. Select the desired action: Turn On All, Turn On TV Only, or Turn On Device Only.
3. Confirm with Enter.

6.2 Language & Display Settings

Change the remote’s language to match your preference:

1. Press Menu !’ “Settings” !’ “Language.”
2. Choose from English, Spanish, French, German, Chinese, and more.
3. Confirm with Enter.

6.3 Custom Button Mapping

Reassign functions to the remote’s programmable buttons:

1. Press Menu !’ “Device Setup” !’ “Button Mapping.”
2. Choose the button to reassign.
3. Select the new function from the list.
4. Confirm with Enter.

6.4 Remote Sleep & Wake Settings

Adjust the auto sleep timer and wake behavior:

1. Press Menu !’ “Settings” !’ “Power Management.”
2. Select the desired sleep duration (5, 10, 15, 30 minutes).
3. Enable or disable “Wake on Remote” to allow the remote to power on the device automatically.

7. Troubleshooting Common Issues

Even the most reliable remotes can encounter occasional hiccups. Below are solutions to common problems.

7.1 Remote Not Responding

- Check the battery level. Recharge if necessary.
- Ensure the remote’s LED is lit. If not, power on by pressing any button.
- Clear any obstructions between the remote and the device’s IR sensor.
- Reprogram the device if the code has been corrupted.

7.2 Device Turns On but Not Responding to Other Commands

- Verify that the device’s IR receiver is functioning.
- Re-enter the device’s code or use the auto search mode.
- Check for firmware updates on the device that may affect IR compatibility.
